The human proalpha 1 (I) chain of type I procollagen is compared with those of calf, rat, mouse and chicken and with the proalpha 2 (I) chain from man. Selective pressure during 250,000,000 years of evolution acted more strongly on the proalpha 1 (I) chain than on the proalpha 2 (I) chain. The alpha 2 (I) chain than on the proalpha 2 (I) chain. The alpha 2 (I) chain domain as sequences are not as highly conserved as those of the C-propeptide domain of the same chain.

                                                                                                                                                                                                                                    ð
                                                          The invention relates to a novel method for generating a secreted trimeric fusion protein. The method comprises creating a DNA construct comprising a transcriptional promoter linked to a template encoding a signal peptide sequence followed, via an in-frame fusion. to the polypeptide to be trimerized, which in turn is joined in-frame to a polypeptide to be trimerized, and introducing the construct into a cukaryotic cell. Receptor decoys, e.g. soluble receptors consisting of only the extracellular ligand-binding domain, may be used to intercept a ligand and thus overcome the overactivation of a receptor during disease treatment. Trimeric receptor decoys theoretically should have a much higher affinity to their ligand than their dimeric counterparts. Such cationally designed soluble trimeric receptor analogs could significantly increase clinical benefits, as well as lower the amount or frequency of drug injections for each patient. The method of the invention may be useful for generating a secreted trimeric fusion protein to be used for maturally occurring trimeric ligands. The current sequence is that of the human collagen alpha(1) C-propeptide TO construct construct includes a partial glycine-repeat triple helical region.

                                                                                                                                                                                                                                                                                                                                                                  ठ
comprising a transcriptional promoter linked to a template encoding a signal peptide acquire followed, via an in-frame fusion, to the polypeptide to be trimerized, which in turn is joined in-frame to a polypeptide to be trimerized, which in turn is joined in-frame to a polypeptide to be trimerized, and introducing the construct into a tiret polypeptide to be trimerized, and introducing the construct into a cukaryotic cell. Receptor decoys, e.g. soluble receptors consisting of only the extracellular ligand-binding domain, may be used to intercept a ligand and thus overcome the overactivation of a receptor during disease treatment. Trimeric receptor decoys theoretically should have a much higher affinity to their ligand than their dimeric counterparts. Such rationally designed soluble trimeric receptor analogs could significantly concrained benefits, as well as lower the amount or frequency of drug injections for each patient. The method of the invention may be cuseful for generating a secreted trimeric fusion protein to be used for more efficient neutralization of the biological activities of their metral to recurring trimeric ligands. The current sequence is that of the human placental alkaline phosphatase (AP)-human collagen T0 construct includes a partial glycine-repeat triple helical region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2006

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      a DNA construct comprising a promoter linked to a template encoding a signal peptide sequence followed by in-frame fusion to polypeptide to be trimerized.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel method for generating a secreted trimeric fusion protein. The method comprises creating a DNA construct comprising a transcriptional promoter linked to a template encoding a signal peptide sequence followed, via an in-frame fusion, to the polypeptide to be trimerized, which in turn is joined in-frame to a

```
first polypeptide to be trimerized, and introducing the construct into a cukaryotic cell. Receptor decoys, e.g. soluble receptors consisting of only the extracellular ligand-binding domain, may be used to intercept a ligand and thus overcome the overactivation of a receptor during disease treatment. Trimeric receptor decoys theoretically should have a much righer affinity to their ligand than their dimeric counterparts. Such rationally designed soluble trimeric receptor analogs could significantly increase clinical benefits, as well as lower the amount or frequency of drug injections for each patient. The method of the invention may be useful for generating a secreted trimeric fusion protein to be used for more efficient neutralization of the biological activities of their naturally occurring trimeric ligands. The current sequence is that of the numan soluble CD4-human collagen alpha (I) C-propeptide TO fusion DNA (sCD4-TO) of the invention. The collagen TO construct includes a partial
polypeptide capable of self-trimerization which is heterologous to the

```

The invention relates to a novel method for generating a secreted trimeric fusion protein. The method comprises creating a DNA construct comprising a transcriptional promoter linked to a template encoding a signal peptide sequence followed, via an in-frame fusion, to the polypeptide to be trimerized, which in turn is joined in-frame to a polypeptide capable of self-trimerization which is heterologous to the first polypeptide to be trimerized, and introducing the construct into a eukaryotic cell. Receptor decoys, e.g. soluble receptors construct into a only the extracellular ligand-binding domain, may be used to intercept a ligand and thus overcome the overactivation of a receptor during disease treatment. Trimeric receptor decoys theoretically should have a much higher affinity to their ligand than their dimeric counterparts. Such rationally designed soluble trimeric receptor analogs could significantly

increase clinical benefits, as well as lower the amount or frequency of drug injections for each patient. The method of the invention may be useful for generating a secreted trimeric fusion protein to be used for more efficient neutralization of the biological activities of their naturally occurring trimeric ligands. The current sequence is that of the human soluble TNF-RII-human collagen alpha (I) C-propeptide TO fusion DNA (STNF-RII-TO) of the invention. The collagen TO construct includes a
                                                                                                                                                                                                                                                                                                                                                                                                                   ACCCGCCCGCACCTGCGTGACCTCAAGATGTGCCACTCTGAAGAGGTGGAGAGT 372

The method comprises comparing the level of expression of a marker (gene/polypeptide see ACCS0076 to ACCS0334 and ABR47386 to ABR47381 in a patient sample and the normal level of expression of the marker in a control non-breast cancer sample, where a patient sample and the normal lawrier in the patient sample and the normal lawrent in the patient is afflicted with breast cancer. The breast cancer associated sequences from the present invention have cycostatic activities and can be used in gene therapy. The method is useful for diagnosing and treating breast cancer. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CTGGTCCTGTTGGTCCCCCCCGGCCCTCCTGGACCTCCTGGTCCCCCTGGTCCTCCCAGCG 132

The invention relates to a novel method for diagnosing and analysing autoimmune disease or arthritides. The method comprises obtaining a autoimmune disease or arthritides. The method comprises obtaining the that results in a gene expression signature of the mRNA, and using that gene expression signature to diagnose or analyse the autoimmune disease or arthritides in the patient, where gene expression of at least 60% of the genes correlates with that of the gene signature. The invention further comprises: a treatment of rheumatoid arthritis; identification of genes for targeting in the treatment of rheumatoid arthritis in a mammal an array or gene chip, specific for rheumatoid arthritis; diagnosis or analyses of autoimmune disease or rheumatoid arthritis; screening the efficacy of a candidate drug in vitro for the treatment of collageninduced arthritis; and reducing the symptoms associated with collageninduced arthritis; The compositions of the invention have the following

Diagnosing and analyzing autoimmune disease using gene expression profiles and microarray technology, useful for diagnosing and treating rheumatoid arthritis, lupus, fibrositis, osteoarthritis, fibromyalgia and

31-OCT-2002; 2002WO-US035433 31-OCT-2001; 2001US-0336220P activities: immunosuppressive, antirheumatic, antiarthritic, osteopathic, antigout, antiinflammatory, dermatological, and immunomodulacory. The methods and compositions of the present invention are useful for diagnosing and treating autoimmune disease or arthritides, such as rheumatoid arthritis, lupus, ankylosing spondylitis, fibrositis, fibromyalgia, osteoarthritis, gout, juvenile rheumatoid arthritis, and an immune disease caused by an infectious agent. This polynucleotide represents a DNA sequence relating to the genes used in the analysis and treatment of autoimmune diseases or arthritides. Note: This sequence is not shown in the specification. It has been supplied in an electronic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AGACTGGTGAGACCTGCGTGTACCCCACTCAGCCCCAGTGTGGGCCCAGAAGAACTGGTACA 4059
                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of a gene in both samples and comparing the expression in the first soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CTGGTTTCGACTTCAGCTTCCTGCCCCAGCCACCTCAAGAGAAGGCTCACGATGGTGGCC 192
                                                                                                                                                                                                 Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CTGGTCCTGTTGGTCCCCCCCGGCCCTCCTGGACCTCCTGGTCCCCCTGGTCCTCCCAGCG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a method (M1) for diagnosing breast cancer in a patient. The method comprises comparing the level of cancer in a patient. The method comprises comparing the level of cancer in a postent with that in a normal patient sample, where a difference in the gene expression in the first sample compared to that in the second sample is a diagnostic of the disease. Also claimed are: method (M2) for distinguishing between normal and disease tissues; method (M3) for monitoring the response of a breast cancer patient to treatment with an anti-cancer agent; method (M4) for identifying a compound for treating comprising two or more probes corresponding to genes selected from ADR99121 and the gene products are polypeptides selected from ADR99121 and the gene products are polypeptides selected from ADR99122 and the gene products are polypeptides selected from ADR99121 and the gene products are polypeptides selected from ADR99122. ADR99248. M1 is useful for diagnosing breast cancer. M2 and the array are useful for distinguishing between normal and disease tissue. M3 is useful cor monitoring the response of a breast cancer patient to treatment with an anti-cancer agent. M4 is useful for identifying a compound for treating breast cancer. Note: The sequence data for this patent did not form and the printed specification, but was obtained in electronic form when the form with the form when the form when the form with the form with the form when the form with the form when the form with the form with the form with the form when the form when the form with the form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3640 CTGGTCCTGTTGGTCCCCCCGGCCCTCCTGGACCTCCTGGTCCCCCGGGTCCTCCCAGCG 3699

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel method for characterizing the state of a neoplastic disease in a subject comprising determining the pattern of expression levels of at least 6, 8,10,15,20,30,47 or 67 marker genes in a biological sample, comparing the pattern of expression levels with reference patterns of expression levels and characterizing the state of the neoplastic disease in the subject from the outcome of the comparison. The method of the invention demonstrates cytostatic applications and may be useful in characterizing the state of a neoplastic disease in a subject, preferably breast cancer, in gene therapy and for screening for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                genes in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      132
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  312
                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method of detecting lineage-specific mRNA in the sample. The methods are useful for determining the clinical outcome of a progenitor cell transfer in a subject, and for identifying or quantifying lineage-specific cells. The present sequence represents a human cDNA that encodes a protein used to identify lineage-specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              72

```
The invention relates to detecting differential expression of one or more nucleic acid sequences (appearing as AEA04356-AEA04448 in a biological sample comprising obtaining the sample from a subject, and detecting a change in the expression level of one or more nucleic acid sequences, is nevel to a control expression level of the nucleic acid sequences, is nevel included are detecting cancer (or a pre-malignant condition thereof) in a subject (comprising comparing the expression level of one or more nucleic acid sequences in a biological sample from the subject (and pre-malignant condition) are least two-fold in the expression level of the mucleic acid sequences, where a change of at least two-fold in the expression level of the mucleic acid sequences, where a change of at least two-fold in the expression level of the mucleic acid sequences is indicative of cancer or pre-malignant condition), monitoring the condition) in a subject (by detecting in a biological sample of the aucleic acid sequences, repeating the first step at a subsequent point in time the expression of cancer or a pre-malignant condition in the subject, where a change in the acid sequences, repeating the subject (comprising detecting in a malignant condition in the subject (comprising detecting in a subject the subject the expression level of one or more or more or more or mucleic acid sequences, comparing the expression level of one or more or more or mucleic acid sequences, comparing the expression level of one or more or more or mucleic acid sequences, comparing the expression level of the subject, the expression level of one or more or more or more or more or accept prognosis of the subject based on the comparison), determining the efficacy of a therapy for inhibiting cancer in a subject, a polypeptide encoded by the nucleic acids above the polypeptide sequence, and detecting an authorial as mucleic acids above the polypeptide sequence, and detecting in a biological sample the polypeptide sequence, and detecting a condition or more nucleic 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Detecting expression of one or more nucleic acid sequences in biological sample, useful for detecting cancer, comprises detecting a change in the expression level of one or more nucleic acid sequences relative to a

biological sample, which is useful for detecting cancer (especially colon
                cancer), monitoring the onset, progression, or regression of cancer or a pre-malignant condition, or determining prognosis for cancer or its pre-malignant condition in a subject, or for determining the efficacy of a test compound for inhibiting cancer in a subject. The compound is useful for inhibiting cancer in a subject. The antibodies may also be used to treat cancer. The present sequence is a cDNA from a human gene over-
                                                                                                                                                                                                                                                                                                          72

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of the human gene for the pro-alpha-1 chain of type I procollagen. The present invention relates to antisense oligonuclectides (ASOs) and their use in inhibiting expression of type I procollagen. The ASOs comprise 18-25 nuclectides and are complementary to a nuclectide sequence from position 750 to position 3900 of the present sequence. They are capable of inhibiting the expression of the present sequence. They are capable of inhibiting the expression of the present position 750-900, 1200-1300, 1400-1500, 1450-1550, 1850-2000, 2500-2600, 2850-2850 and 3800-3900 of the present sequence, and is especially one of those ASOs given in AAF90492-503. The ASOs are used in a claimed method of treating, or reducing a risk of, a collagen disorder. Such disorders may include those caused by overproduction of collagen fibres, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   expression

to be tested for anti-neoplastic activity, determining a change in cappression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 954 identical to (S), where a change in activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

                                                                                                                                                                                                                                                                                                                                     The present invention describes a method (M1) for screening for an antinoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 8447 sequences (S), where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 comprises a sequence (S) selected from 8447 sequences (given in ABL61664 comprises a sequence (S) selected from 8447 sequences (I) has cytostatic expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is anti-neoplastic agent. MI can be used in the treatment of cancer such compreties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                        Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
